

CSS background-position Property

Last Updated : 11 Jul, 2025

The CSS background-position property sets the starting position of a background image within an element. It allows you to use keywords, percentages, or length values to control where the image is placed.

This property helps customize the visual layout by precisely aligning background images, enhancing the overall design and appearance of your webpage.

Syntax

```
element {  
  background-position: value;  
}
```

Note: The [background-image](#) is placed default to the top-left corner of an element with a repetition on both horizontally & vertically.

What is the background-position Property?

The background-position property in CSS specifies the initial position of the background image. By default, a background image is placed at the top-left corner of an element. However, with the background-position property, you can control the exact position of the image within the element, providing flexibility in design and layout.

Property values:

Here's a table format for the CSS background-position property values and their descriptions:

Property	Description
background-position: left top;	Places the image in the top left corner.
background-position: left center;	Aligns the image at the center-left.
background-position: left bottom;	Positions the image in the bottom left corner.
background-position: center top;	Places the image at the top center.
background-position: center center;	Centers the image both horizontally and vertically.
background-position: center bottom;	Aligns the image at the bottom center.
background-position: right top;	Positions the image in the top right corner.
background-position: right center;	Aligns the image at the center-right.
background-position: right bottom;	Places the image in the bottom right corner.
background-position: 25% 75%;	Positions the image 25% from the left and 75% from the top.
background-position: 30px 80px;	Positions the image 30px from the left and 80px from the top.

Lets discuss, each property in detail:

1. background-position: left top

The background-position: left top; property places the background image at the top-left corner of the element, aligning it with the element's top and left edges.

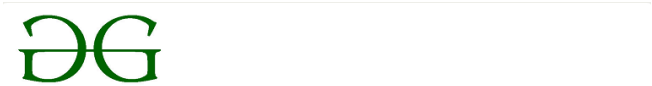

Example: This example illustrates the use of **background-position** property where the position value is set to the left top.

```
<!DOCTYPE html>
<html>

<head>
  <title> CSS background-position Property </title>
  <style>
    body {
      background-image: url(
"https://media.geeksforgeeks.org/wp-content/uploads/background-position1.png");
      background-repeat: no-repeat;
      background-attachment: fixed;
      background-position: left top;
    }
  </style>
</head>

</html>
```

Output:

2. background-position: left center

The background-position: left center; property places the background image at the center left of the element, aligning it vertically centered and horizontally to the left.

Example: This example illustrates the use of **background-position** property where the position value is set to the left center.

```
<!DOCTYPE html>
<html>

<head>
  <title> CSS background-position Property </title>
  <style>
    body {
      background-image: url(
"https://media.geeksforgeeks.org/wp-content/uploads/background-position1.png");
      background-repeat: no-repeat;
      background-attachment: fixed;
      background-position: left center;
    }
  </style>
</head>

</html>
```

Output:

3. background-position: left bottom

The background-position: left bottom; property places the background image at the bottom-left corner of the element, aligning it with the element's bottom and left edges.

Example: This example illustrates the use of **background-position** property where the position value is set to the left bottom position.

```
<!DOCTYPE html>
<html>

<head>
  <title> CSS | background-position Property </title>
  <style>
    body {
      background-image: url(
"https://media.geeksforgeeks.org/wp-content/uploads/background-position1.png");
      background-repeat: no-repeat;
      background-attachment: fixed;
      background-position: left bottom;
    }
  </style>
</head>

</html>
```

Output:

4. background-position: center top

The background-position: center top; property places the background image at the top center of the element, aligning it horizontally centered and at the top edge.

Example: This example illustrates the use of **background-position** property where the position value is set to the center top position.

```
<!DOCTYPE html>
<html>

<head>
  <title> CSS | background-position Property </title>
  <style>
```

```
body {
  background-image: url(
    "https://media.geeksforgeeks.org/wp-content/uploads/background-position1.png");
  background-repeat: no-repeat;
  background-attachment: fixed;
  background-position: center top;
}
</style>
</head>

</html>
```

Output:

5. background-position: center center

The background-position: center center; property places the background image at the exact center of the element, aligning it both horizontally and vertically centered.

Example: This example illustrates the use of **background-position** property where the position value is set to the center center position.

```
<!DOCTYPE html>
<html>

<head>
  <title> CSS | background-position Property </title>
  <style>
    body {
      background-image: url(
        "https://media.geeksforgeeks.org/wp-content/uploads/background-position1.png");
      background-repeat: no-repeat;
      background-attachment: fixed;
      background-position: center center;
    }
  </style>
</head>

</html>
```

Output:

6. background-position: center bottom

The background-position: center bottom; property places the background image at the bottom center of the element, aligning it horizontally centered and at the bottom edge.

Example: This example illustrates the use of **background-position** property where the position value is set to the center bottom position.

```
<!DOCTYPE html>
<html>

<head>
  <title> CSS | background-position Property </title>
  <style>
    body {
      background-image: url(
"https://media.geeksforgeeks.org/wp-content/uploads/background-position1.png");
      background-repeat: no-repeat;
      background-attachment: fixed;
      background-position: center bottom;
    }
  </style>
</head>

</html>
```

Output:

7. background-position: right top

The background-position: right top; property places the background image at the top-right corner of the element, aligning it with the element's top and right edges.

Example: This example illustrates the use of **background-position** property where the position value is set to the right top position.

```
<!DOCTYPE html>
<html>

<head>
  <title> CSS | background-position Property </title>
  <style>
    body {
      background-image: url(
"https://media.geeksforgeeks.org/wp-content/uploads/background-position1.png");
      background-repeat: no-repeat;
      background-attachment: fixed;
      background-position: right top;
    }
  </style>
</head>

</html>
```

Output:

8. background-position: right center

The `background-position: right center;` property places the background image at the center right of the element, aligning it vertically centered and horizontally to the right.

Example: This example illustrates the use of **background-position** property where the position value is set to the right center position.

```
<!DOCTYPE html>
<html>

<head>
  <title> CSS | background-position Property </title>
  <style>
    body {
      background-image: url(
"https://media.geeksforgeeks.org/wp-content/uploads/background-position1.png");
      background-repeat: no-repeat;
      background-attachment: fixed;
      background-position: right center;
    }
  </style>
</head>

</html>
```

Output:

9. background-position: right bottom

The background-position: right bottom; property places the background image at the bottom-right corner of the element, aligning it with the element's bottom and right edges.

Example: This example illustrates the use of **background-position** property where the position value is set to the right bottom position.

```
<!DOCTYPE html>
<html>

<head>
  <title> CSS | background-position Property </title>
  <style>
```

```
body {
  background-image: url(
    "https://media.geeksforgeeks.org/wp-content/uploads/background-position1.png");
  background-repeat: no-repeat;
  background-attachment: fixed;
  background-position: right bottom;
}
</style>
</head>

</html>
```

Output:

10. background-position: X% Y%

The background-position: X% Y%; property positions the background image using percentage values, where X% denotes horizontal and Y% denotes vertical position relative to the element's top-left corner.

Example: This example illustrates the use of **background-position** property where the position value is set in the form of a percentage.

```
<!DOCTYPE html>
<html>

<head>
  <title> CSS | background-position Property </title>
  <style>
    body {
      background-image: url(
        "https://media.geeksforgeeks.org/wp-content/uploads/background-position1.png");
      background-repeat: no-repeat;
      background-attachment: fixed;
      background-position: 25% 75%;
    }
  </style>
</head>

</html>
```

Output:

11. background-position: Xpx Ypx

The background-position: Xpx Ypx; property positions the background image using pixel values, where Xpx specifies the horizontal and Ypx the vertical position from the element's top-left corner.

Example: This example illustrates the use of **background-position** property where the position value is set in the form of pixels.

```
<!DOCTYPE html>
<html>

<head>
  <title> CSS | background-position Property </title>
  <style>
    body {
      background-image: url(
"https://media.geeksforgeeks.org/wp-content/uploads/background-position1.png");
      background-repeat: no-repeat;
      background-attachment: fixed;
      background-position: 30px 80px;
    }
  </style>
</head>

</html>
```

Output:

Supported Browsers

The browser supported by the **background-position** property are listed below:

- [Google Chrome](#)
- [Edge](#)
- [Firefox](#)
- [Opera](#)
- [Safari](#)

Note: After recent updates, all major browsers support the background-position property, and there are no known browsers that do not support this property.
