background position property

The `background-position` property in CSS sets the starting position of a background image within its container. By default, images are placed at the top-left corner (`0% 0%`).

Common Syntax & Values

- **Keywords:** Uses `top`, `bottom`, `left`, `right`, and `center`.
 - Example: `background-position: center bottom;`
- **Length Units:** Uses exact values like `px`, `em`, or `rem`.
 - Example: `background-position: 50px 100px;` (50px from left, 100px from top).
- **Percentages:** Positions the image relative to both the container and the image itself.
 - Example: `background-position: 50% 50%;` perfectly centers the image.
- **Single Value:** If only one value is provided, the second defaults to `center`.
- **Four-Value Syntax:** Allows for specific offsets from any edge.
 - Example: `background-position: right 20px bottom 10px;` (20px from the right edge and 10px from the bottom).

Key Usage Tips

- **Multiple Backgrounds:** You can set positions for multiple images by separating values with commas (e.g., `background-position: left top, right bottom;`).
- **Negative Values:** These can be used to pull an image partially out of the container's view.
- **Image Sprites:** This property is essential for [CSS Sprites](#), where you shift a single large image to show only specific parts through a smaller container.
