CSS Image Gallery

A CSS image gallery is a collection of images that is displayed in an organized, and often responsive way, on a web page.

Here we use CSS to create an image gallery:

The HTML structure for an image gallery is:

- A container element to wrap the entire gallery (like a `<div>` with `class="gallery"`).
- Another container element for each image (like a `<div>` with `class="gallery-item"`), that contains the `<img>` tag and possibly a description.

Here is the HTML and CSS code:

Example

```
<html>
<head>
<style>
div.gallery {
  display: flex;
```

```
div.gallery-item {
  margin: 5px;
  border: 1px solid #ccc;
  width: 180px;
}

div.gallery-item:hover {
  border: 1px solid #777;
}

div.gallery-item img {
  width: 100%;
  height: auto;
}

div.gallery-item div.desc {
  padding: 15px;
  text-align: center;
}
</style>
</head>
<body>

<div class="gallery">

<div class="gallery-item">
  <a target="_blank" href="img_5terre.jpg">
    
  </a>
  <div class="desc">Cinque Terre</div>
</div>

<div class="gallery-item">
  <a target="_blank" href="img_forest.jpg">
    
  </a>
  <div class="desc">Green Forest</div>
</div>

<div class="gallery-item">
  <a target="_blank" href="img_lights.jpg">
    
  </a>
  <div class="desc">Northern Lights</div>
</div>

<div class="gallery-item">
  <a target="_blank" href="img_mountains.jpg">
    
```

Tip: We have used `display: flex;` for the image gallery above. This layout module is effective for arranging images in rows or columns. You will learn more about [CSS Flexbox](#) later in our CSS Tutorial.

CSS Responsive Image Gallery

Here we use [CSS media queries](#) to re-arrange the images on different screen sizes:

- If screen is larger than 768px wide - show four images side by side
- If screen is smaller than 768px - show two images side by side
- If screens is smaller than 480px - stack the images vertically (width: 100%)

Tip: You will learn more about [media queries](#) later in our CSS Tutorial.
