

CSS, Flexbox & Grid Quiz

Question Paper + Answer Key (MCQ)

Date: 2026-02-16

Instructions

- Answer all questions by selecting one option (A, B, C, or D).
- Each question carries equal marks.
- Use the Answer Key section to check your work.

Question Paper

Q1. How do you center an element horizontally using Flexbox?

- A) `justify-content: center;`
- B) `align-items: center;`
- C) `align-items: center;`
- D) `justify-items: center;`

Q2. Using Media Queries, how can you apply different CSS styles based on the device's screen size?

- A) By using the `@media` rule
- B) By using the `device-size` property
- C) By using the `screen-width` attribute
- D) By using the `responsive` keyword

Q3. Which CSS property is used to create a grid layout with equal-width columns?

- A) `grid-template-rows`
- B) `grid-auto-rows`
- C) `grid-template-columns`
- D) `grid-auto-columns`

Q4. How can an element take up the remaining space in a flex container?

- A) `flex-grow: 0;`
- B) `flex-shrink: 0;`
- C) `flex-basis: 0;`
- D) `flex: 1;`

Q5. What is the purpose of the CSS `gap` property in Grid layout?

- A) To specify the spacing between grid items
- B) To control the background color of grid items
- C) To set the size of grid columns and rows
- D) To align grid items vertically

Q6. How can you apply a CSS style only when the mouse hovers over an element?

- A) :hover selector
- B) :active selector
- C) :focus selector
- D) :visited selector

Q7. How can you change the order of flex items using CSS?

- A) flex-order property
- B) order property
- C) flex-direction property
- D) flex-wrap property

Q8. How do you select an element with the ID "MyElement" using CSS?

- A) #myElement
- B) .myElement
- C) element.myElement
- D) element#myElement

Q9. How do you target devices with a maximum width of 768 pixels using a media query?

- A) @media (max-width: 768px)
- B) @media (min-width: 768px)
- C) @media (width <= 768px)
- D) @media (width >= 768px)

Q10. How can you make an element disappear from the page using CSS?

- A) visibility: hidden;
- B) display: none;
- C) opacity: 0;
- D) position: absolute; left: -9999px;

Answer Key

Question	Correct Option
Q1	A
Q2	A
Q3	C
Q4	D
Q5	A
Q6	A
Q7	B
Q8	A
Q9	A
Q10	B

Mini Explanations + Code Examples

Q1 (Flex horizontal center)

justify-content controls alignment along the main axis (left-right in a row flex container).

```
/* Parent */
.container{
  display: flex;
  justify-content: center; /* left-right center */
}
```

Q2 (Media query)

Use @media to apply CSS only when the condition matches (like a max screen width).

```
/* default */
.box { font-size: 20px; }

/* for small screens */
@media (max-width: 576px){
  .box { font-size: 14px; }
}
```

Q3 (Equal-width grid columns)

grid-template-columns defines your columns. Use fr units for equal widths.

```
.grid{
  display: grid;
  grid-template-columns: 1fr 1fr 1fr; /* 3 equal columns */
}
```

Q4 (Take remaining space in flex)

flex: 1 is a common shortcut that makes an item grow to fill remaining space.

```
.item{
  flex: 1; /* grows to fill remaining space */
}
```

Q5 (Gap in grid)

gap adds spacing between items (works in grid and flex).

```
.grid{
  display: grid;
  gap: 20px; /* space between grid items */
}
```

Q6 (Hover)

Use :hover to apply styles when the mouse is on an element.

```
button:hover{
  background: black;
  color: white;
}
```

Q7 (Order in flex)

order changes the visual order of flex items without changing the HTML order.

```
.first { order: 2; }
.second { order: 1; } /* will appear first */
```

Q8 (Select by ID)

Use # for an id selector.

```
#myElement{
  border: 2px solid red;
}
```

Q9 (Max width 768px)

max-width targets screens up to that width (common for tablets / small screens).

```
@media (max-width: 768px){
  .menu { display: none; }
}
```

Q10 (Disappear completely)

display: none removes the element and its space from the layout.

```
.hide{
  display: none; /* removes it + removes its space */
}
```
