

what does it mean in figma??

The opacity can also be adjusted using the “Drag Tool” in the Square shaped color icon of VS code.

Thought for 44s >

In **Figma**, that panel is the **Fill** of a layer (its background color).

What your screenshot means

- `FF900E` = the fill **color** in hex (a bright orange).
- `10%` = the **opacity (transparency)** of that fill.
  - So it's the same orange, but **very light/faded** because it's only **10% visible** (90% transparent).
- The little **checkerboard** next to the color is Figma's way of showing **transparency**.
- The **eye icon** toggles the fill **on/off** (hide/show that fill).
- `+` adds another fill (you can stack multiple fills).
- `-` removes that fill.

Same thing in CSS (for web dev)

`FF900E` = RGB `(255, 144, 14)`

So “FF900E at 10%” is like:

CSS

Copy code

```
background-color: rgba(255, 144, 14, 0.10);
```

✔ Equivalent shorthand (8-digit hex with alpha) can be:

CSS

Copy code

```
background-color: #FF900E1A; /* 1A ≈ 10% alpha */
```

If you want, tell me what element this is (button/card/etc.) and I'll show how to match the exact Figma look in HTML/CSS.
